

NextGen[®] Inpatient Clinicals

Version 2.4

Finally, a partner who has the meaningful hospital solutions to help you on your path toward Meaningful Use. NextGen Healthcare's Inpatient Clinicals version 2.4 is certified for Meaningful Use – and has also passed rigorous tests in functionality, security, and interoperability to become a premarket conditionally CCHIT® Certified 2011 Inpatient EHR.

NextGen Inpatient Clinicals
Version 2.4
CC-1112-300400-1

Why is this Meaningful?

There are very few vendors that can provide certified Inpatient EHR and Ambulatory solutions representing the entire clinical (and financial) workflow of a patient.

And there is only one partner that can provide the clinical solutions for your hospital in a truly Web-based architecture capable of scaling from Critical Access Hospitals all the way to large IDNs—through a cloud-based system that:

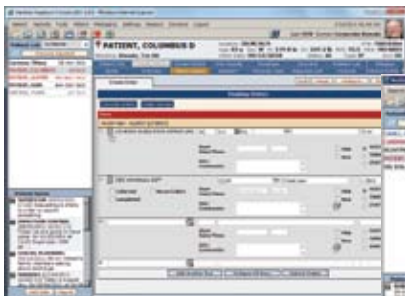

- Is secure and all-encompassing for creating an electronic health record
- Has been operational for over 10 years
- Is backed by our Gold Standard of Client Service (which includes live support 24/7 and proactive monitoring of your systems)

NextGen Healthcare collaborates with you to determine your best practices for layering HIT solutions such as NextGen Inpatient Clinicals and Financials, as well as Ambulatory, onto your operations to: maximize efficiencies, promote quality, enable better care, and enhance the patient experience.

"We're pleased to see NextGen further along than other vendors in terms of being able to help clients meet Meaningful Use requirements."

Laura Jensen, Vice President of Patient Care,
St. Croix Regional Medical Center, St. Croix Falls, WI.

NextGen CPOE

NextGen Clinical Documentation

NextGen Flowsheet Graphing Function

NextGen Inpatient Clinicals includes:

Computer Physician Order Entry (CPOE)

Fully integrated into the NextGen® Clinical Suite, CPOE empowers physicians to be caregivers, not clerks, by automating order entry using Clinical Decision Support and pre-defined order sets.

Clinical Data Repository (CDR)

Allows for the reposing of all clinical data in one centralized database.

Clinical & Physician Documentation

Facilitates full electronic charting at the point-of-care to minimize problems with legibility – and help meet accreditation requirements (i.e. Joint Commission) and core measures. Flexible design promotes interdisciplinary communication, and can aid in improving patient outcomes through regular charting of patient conditions and suggested Care Plans.

Barcoded Medication Administration

This barcode, bedside-enabled system tracks and documents the safe use of medication at the point-of-care, promoting the “five rights”.

Order Management

A comprehensive browser-based application that effectively manages the flow of interdepartmental communication, including: orders, results, charges, work orders, email, patient education, and reports.

Physician View

Enables the immediate retrieval of real-time patient information critical to timely diagnosis and treatment. A physician dashboard can be customized to the particular physician’s preferences.

Provider Mobility

A key element to continuous care, NextGen Mobility provides Smart Phone access on any phone using a browser that works with several of its key applications, including: CPOE, Physician View, and Clinical Documentation.

Laboratory Information System

Utilizes the latest technologies to deliver a comprehensive laboratory information system developed for hospitals, reference labs, multi-site laboratories and physician groups.

Pharmacy Information System

Integrated with CPOE and Medication Administration systems for closed loop medication safety.

NextGen Radiology

Contributes to efficient department operation with online examination order processing from requisition through results reporting.

Additional Functionality

Respiratory, physical, occupational, speech, and dietary therapy work lists can be automatically generated while care plans are automatically populated with the results of the latest assessments.

CCHIT® is a registered mark of the Certification Commission for Health Information Technology.
