

A woman with long brown hair, wearing a dark pinstriped blazer over a light purple collared shirt, is shown in profile from the chest up. She is looking down at a handheld device she is holding with both hands. The device has a screen and a keypad. The background is a bright, out-of-focus office space with large windows. The overall tone is professional and modern.

NextGen Healthcare:  
Innovation That Helps You  
Stay One Step Ahead

**NEXTGEN**  
HEALTHCARE

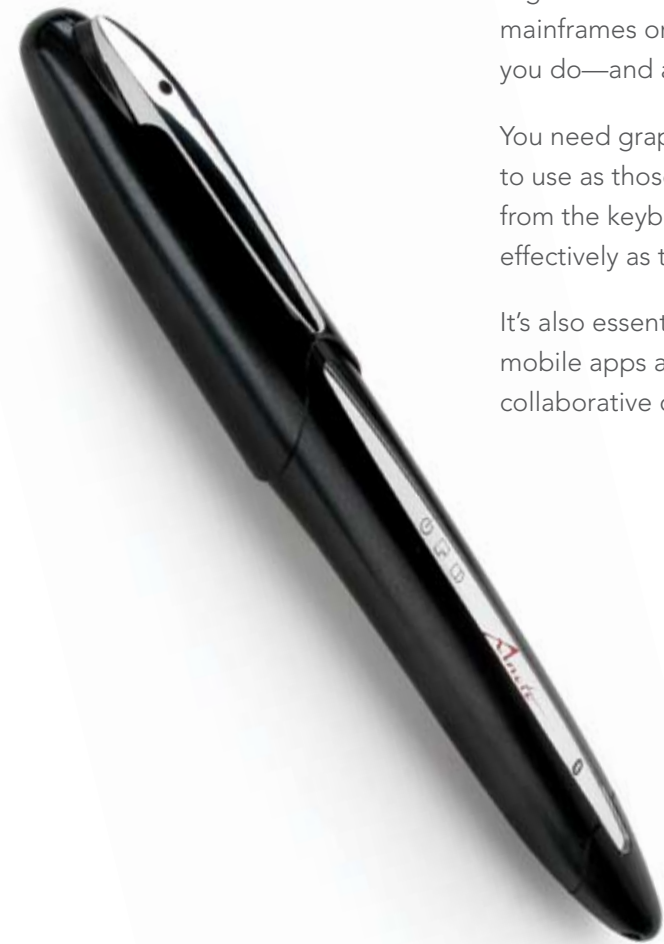

To remain successful, you need new technologies and innovative ways to improve your workflow and quality of care—in the hospital, office or on the move. With help from NextGen Healthcare, you'll be Ready2Go!

# WHAT YOU NEED:

A generation ago, most healthcare information was captured on mainframes or on desktops. Now you need solutions that go wherever you do—and are available whenever you need them.

You need graphical interfaces that are just as visually intuitive and easy to use as those found on smartphones. And it's time to be liberated from the keyboard, so that handwritten notes can be used just as effectively as typed ones.

It's also essential to have round-the-clock access to training tools, mobile apps and other solutions from the NextGen Healthcare collaborative development community.

## WHAT NEXTGEN HEALTHCARE DELIVERS:

**NextPen™** allows you to capture electronic data from clinical staff and patients as they write. That information then flows automatically into structured data fields in NextGen® Ambulatory EHR. You don't need special training because it functions just like an ordinary pen. And because NextPen uses today's most advanced data capture technology, you get the "best of both worlds": great accuracy and ease of use.

**NextGen® Dashboard** makes it easier than ever to monitor clinical, financial and operational data in a rich graphical format, with preprogrammed charts that are ready to go at installation (but can be customized to your unique needs, too).

**NextGen® Mobile** solutions let physicians connect quickly and easily to the NextGen Ambulatory EHR using a smartphone, an iPad™ or other mobile devices. From any location, at any hour, you can access patient data, order lab results, prescribe medications, change appointment schedules, and much more.

**NextGen Healthcare's Population Management** tool is a cost-effective tool that automates patient outreach, ensuring that all patients—not just those with the highest risk factors—can be continuously engaged. With the Population Management tool, it's difficult for patients to "fall through the cracks" when it's time for screenings and follow-ups. And because the Population Management tool automatically documents the reason for patient outreach, you can improve your organization's quality compliance.

**The NextGen Healthcare Online Store** is your newly expanded, one-stop source for NextGen Healthcare-approved solutions and services, including EHR templates, forms, and mobile apps. Because our collaborative development community is growing fast, the store is an easy way to buy or sell NextGen® solutions and third-party products and services. And many of these products are available only at the store! We've also made purchasing faster and easier, giving you the choice of invoicing or credit cards.

NEXTPEN

## KEY FEATURES:

### From paper to your NextGen Ambulatory EHR, all with the stroke of a pen

- > Creates structured data
- > Captures signatures and drawings
- > Usable with ordinary copy paper

In most practices and health systems today, when you hand someone a pen and a form, there is no confusion about how to use them – you take off the cap and enter information on the form. When they hand the pen and form back, it's understood that to electronically capture the data, the form will be scanned or someone will transcribe the data.

With the innovative NextPen digital pen solution, however, everything changes. In the moment that the pen writes or draws on the form, the information becomes structured data and the function of the paper is complete. In the past, the form was the record. Now the form has become a temporary, yet very intuitive data entry device and the pen has become the data capture device, much like a keyboard on a computer. Now the data is stored in the pen, waiting to be uploaded to the patient's record in NextGen Ambulatory EHR. The form can be shredded or given to the patient for his or her records. And NextPen, which utilizes Anoto technology, will store data from hundreds of forms without running out of space.

Imagine – a tiny camera in the pen's tip interpreting the pen's position on the form, capturing everything the patient or provider writes or draws, and turning handwritten forms into structured data elements that become part of a patient's electronic health record. By placing the pen in a USB docking station, data is uploaded to where the information can be reviewed and approved. Upon approval, NextPen automatically fills the structured data fields in NextGen Ambulatory EHR and an image of the form is kept, making it ideal for storing signatures and drawings.

## Saves time, reduces costs

For the first time, you can go from handwriting (NextPen recognizes both cursive and block printing) to structured data, just as if you'd typed it into a computer. For your staff, using NextPen means no more transcribing, scanning, or filing of forms. And for those forms that include checkboxes, drawing, or where numeric data capture is required, NextPen may well be the fastest way to input the data electronically.

# NEXTGEN DASHBOARD

## KEY FEATURES:

- > Visually rich, graphical format
- > Clinical, financial, and operational data
- > Data from multiple sources and databases
- > Segmentation by provider or practice

NextGen Dashboard can help you improve the quality of patient care by identifying treatment opportunities and increasing overall productivity through better management of resources, both of which can ultimately enhance your practice's overall financial performance.

Equipped with multiple pre-programmed charts, NextGen Dashboard is ready to go at installation, and with its easy-to-use interface, users can quickly create and save their own personal charts. Plus, to create a more thorough picture of a practice's performance, data can be extracted from not only the NextGen database, but also from other data sources.

If someone asked you how many of your patients with diabetes mellitus had their blood pressure controlled, would you be able to find the answer quickly? Could you find it and segment it by provider or by practice? Or, could you find how many encounters were scheduled month-to-date and how many of the appointments were canceled or kept, a no-show, or rescheduled?

With NextGen Dashboard, you can find the information quickly and easily, and display it in an easy-to-interpret, colorful and graphical format. If you want even more detail, you can drill down from one level to the next with the click of a mouse.

This provider-based tool can create graphical images that reflect the priorities of the entire practice or of a single person. You can even examine the same data in different formats or use the format to differentiate the data.

## NEXTGEN MOBILE

“ EHR mobile applications that can be used on mobile devices such as the iPhone or Droid are in high demand by physicians, especially younger ones and tech savvy docs. At the NextGen User Group Meeting 2010 I had a chance to play with NextGen’s latest mobile EHR. I have to admit I’m fairly impressed. With NextGen Mobile, providers can make better medical decisions because they have quicker access to patient data, including labs, X-rays, and test results right on their mobile device. Nurses are even more enthusiastic about the solution, because providers no longer have to depend on them to access clinical information...”

-Brian Ahier, Industry Blogger, Healthcare, Technology & Government 2.0 and Health IT Evangelist, Mid-Columbia Medical Center

## KEY FEATURES:

NextGen Mobile offers the most advanced technology available to improve patient care through anytime, anywhere access to view or capture patient data. Below are the key features of each solution.

- > **Patient lookup** — search using name or more advanced criteria
- > **Phone calls** — document calls with quick notes
- > **Appointment schedules** — view current, past, or future
- > **Medications** — prescribe, use custom Sig builder, perform DUR
- > **Allergies** — view, add, update
- > **Orders & lab results** — view and collaborate

NextGen Mobile provides physicians with powerful connectivity to NextGen Ambulatory EHR through mobile devices. A browser-based application, NextGen Mobile works on a variety of popular platforms, including the iPhone®, iPad™, iTouch®, Blackberry®, HTC DROID, or select other smartphone devices.

## Supporting Your Advancing Healthcare Goals:

Providing physicians with real-time remote access to patient information, the NextGen Mobile solution is advancing the goal of making faster, more informed medical decisions. With NextGen Mobile, doctors can reach for patient records— anytime, anywhere, displaying information in the palm of their hand with smart workflows that allow them to diagnose, prescribe, and capture charges for care delivered.

# THE NEXTGEN HEALTHCARE POPULATION MANAGEMENT TOOL

## KEY FEATURES:

- > **Full integration** – For best results and maximum efficiency, NextGen Healthcare’s population management tool can be seamlessly integrated with NextGen Practice Management (including scheduling and autoflow), NextGen Ambulatory EHR and NextGen Patient Portal technologies.
- > **Automatic patient outreach** – You set the notification parameters and NextGen Healthcare’s population management tool does the rest, automatically contacting the patients you choose in the manner you desire.
- > **Better patient “touch points”** – By making it faster and easier to contact patients outside the traditional boundaries of a scheduled visit, we help increase the frequency and quality of patient communication.
- > **Improved documentation** – Automatic documentation in the medical record with the reason for patient outreach provides support for your fee-for-quality initiatives.

### The NextGen Healthcare Population Management tool lets you communicate with patients:

- Faster
- Easier
- More frequently
- More efficiently
- More effectively

The trend is clear: You’re being called to play an increasingly proactive role in patient outreach and engagement. Reimbursement models from Patient Centered Medical Home to the Accountable Care organization—and everything in between—place a premium on providers encouraging patient involvement in their own healthcare decisions.

With NextGen Healthcare’s population management tool, you have a way to reach patients faster, more efficiently and more effectively than ever before. We’ve integrated this innovative solution within NextGen Ambulatory EHR to give you an automated tool that compares patient information against your protocols, then contacts those patients who need services. You simply set the parameters for identifying eligible patients, then task the system to perform the desired outreach—whether by email, automated phone call, or personal call from a care coordinator. General text messages and secure portal communication also can be used.

Whatever method you choose, you gain a cost-effective way to help ensure all your patients—not just those with the highest risk factors—are continuously engaged. We make it tough for patients to “fall through the cracks” when it’s time for screenings, follow-ups, and other important care. And because NextGen Healthcare’s population management tool automatically documents the reason for patient outreach, you can more easily prove compliance with quality care measures.

Where can you find a one-stop shop for buying and selling self-downloadable, self-installable and self-contained software products from NextGen Healthcare and third-party vendors?

The answer is simple: The newly expanded NextGen Healthcare Online Store, now available exclusively to our clients.

The store gives you a quick and easy way to buy and sell a wide variety of products, applications, services, and other merchandise from NextGen Healthcare and other suppliers. Our vetting process ensures that each product accepted on the site not only meets our mission statement, but also compliments the existing NextGen Healthcare portfolio.

Looking to generate extra revenue by selling a fantastic template, form, report, tool or mobile app? The store makes that easy, too. We've re-engineered it to encourage the expansion of a collaborative development community.

There's no need to spend countless hours searching for innovative solutions to your current and future needs. We bring the products to you—many at exclusive store discounts—hassle-free and 24/7.

## KEY FEATURES:

- > **Ease of use** – The NextGen Healthcare Online Store is designed to deliver a simple and intuitive shopping and browsing experience.
- > **Complete product scrutiny** – Our vetting process helps ensure that the products we offer online compliment your existing NextGen® solutions.
- > **State-of-the-art shopping cart** – Our site also features a secured checkout, with payment allowed by credit card or invoice.

### The NextGen Healthcare Online Store provides you with:

- Quick and easy access to NextGen Healthcare and third-party supplier products
- One-stop shopping for self-downloadable, self-installable and self-contained software products
- An effective vehicle for revenue generation
- A collaborative development community

# NEXTGEN HEALTHCARE ONLINE STORE

IT'S NOT YOUR IMAGINATION. THE DIGITAL TRANSFORMATION OF  
HEALTHCARE DELIVERY IS GAINING MOMENTUM – EVERY DAY.
