

# NextGen<sup>®</sup> Mobile

Meeting the challenges of healthcare  
anytime, anywhere

# Expand the reach of Ambulatory EHR

with NextGen® Mobile 

## Access the power of NextGen® Ambulatory EHR.

As the population ages and the number of people suffering from chronic diseases rises, providers know, to meet these challenges head on, they need enhanced technology. And, with the HITECH provisions of ARRA, most providers understand the strategic importance of an EHR.

With this as the backdrop, mobile healthcare technology is a logical next step. In fact, smartphones have already become a way of life for most medical professionals, with nearly 90 percent already using these advanced devices.

NextGen® Mobile gives physicians quick and easy access to key functions in NextGen Ambulatory EHR. As a browser-based application, NextGen Mobile works on a variety of popular platforms, including the iPhone®, iPad®, iPad® 2, BlackBerry®, and HTC Droid® or devices using the Apple, Android™ (Google), or BlackBerry (RIM) operating systems.

## Anytime, anywhere access.

With NextGen Mobile, the power of NextGen Ambulatory EHR can be accessed, anytime, anywhere—especially where desktops and laptops may not be practical or readily accessible—while rounding or on-call after hours, on a golf course, when traveling, or in a meeting.

So, when you urgently need remote access to patient information, you can make faster, better-informed medical decisions using NextGen Mobile.

With NextGen Mobile, documenting patient encounters away from the office is easier, too. Create quick notes to document phone calls and patient visits or use the task function to request an appointment for a patient. Having the ability to add or modify allergies, diagnoses, procedures, and other important parts of the record means patient records are more complete and accurate, as data captured with NextGen Mobile automatically updates your NextGen Ambulatory EHR.

## Enhance your revenue cycle process with the tap of a finger.

Revenue can be lost or delayed when you're on rounds or on-call. Now you can capture charges while making patient visits outside the office. NextGen Mobile allows you to document encounters, capturing important patient information, including diagnosis codes and procedure codes.

Using NextGen Mobile's quick pick feature, quickly select the procedures based upon the 25 most commonly used codes for your location. Need a seldom-used CPT-4 code? Not a problem – just select codes based on categories and descriptions. When done, submit the information to the EHR and charges will route automatically to NextGen® Practice Management for billing.

## Quickly sign off documents with NextGen Mobile's new PAQ feature.

Have a few minutes between patient visits? Waiting for lab results before developing a patient plan? Now you can access your EHR Provider Approval Queue (PAQ) and remotely sign off on lab results, documents, and previously reviewed images that need your attention.

Finding important items couldn't be easier. The automatic color-coding of abnormal results allows you to quickly locate lab results in your PAQ.

## Stay connected to your office with NextGen Mobile

- > **Patient lookup – retrieve, view only**  
Search for patients using patient names or advanced criteria such as social security number, date of birth or phone number
- > **Phone calls – document activities**  
Create quick notes to document phone calls and patient visits when away from the office
- > **Appointments – view today and different dates**  
See your schedule for today, last week or next month
- > **Medications – view, prescribe, renew, update, ePrescribe, refill requests**  
Comprehensive medication module functions including ePrescribing, custom Sig builder, Drug Utilization Review, and more
- > **Allergies – view, add, update, remove & review**  
Review patient allergies, performing DUR
- > **Document & Images – view only**  
View documents and images, including NextGen Document Management images
- > **Orders & Lab Results – view only, trending**  
Lists patient's unsigned, signed-off, and lab tests ordered
- > **Diagnoses – view, add, update, remove**  
Resolved and unresolved diagnoses
- > **Procedures – view, add, update, remove**  
Enter and track procedures to capture charges and avoid duplication of tests
- > **PAQ – View, Approve, Add & Assign task, Reassign, Reject**  
Sign off on lab results, documents, and previously reviewed images in Provider Approval Queue
- > **Tasks – view, process, add, assign**  
View completed tasks by task groups, accept or reject received tasks, or link attachments or patients to a task
